NOCART
Providing Power.

Nocart Power Container

Product overview

The Nocart Power Container is an independent solution which provides energy self-sufficiency. The Nocart Power Container provides a constant, high quality supply of electricity.

Benefits of the Nocart Power Container

High quality

The Nocart Power Container is assembled from high quality components, ensuring a long operating lifetime. It has been designed to comply with European standards.

Stability

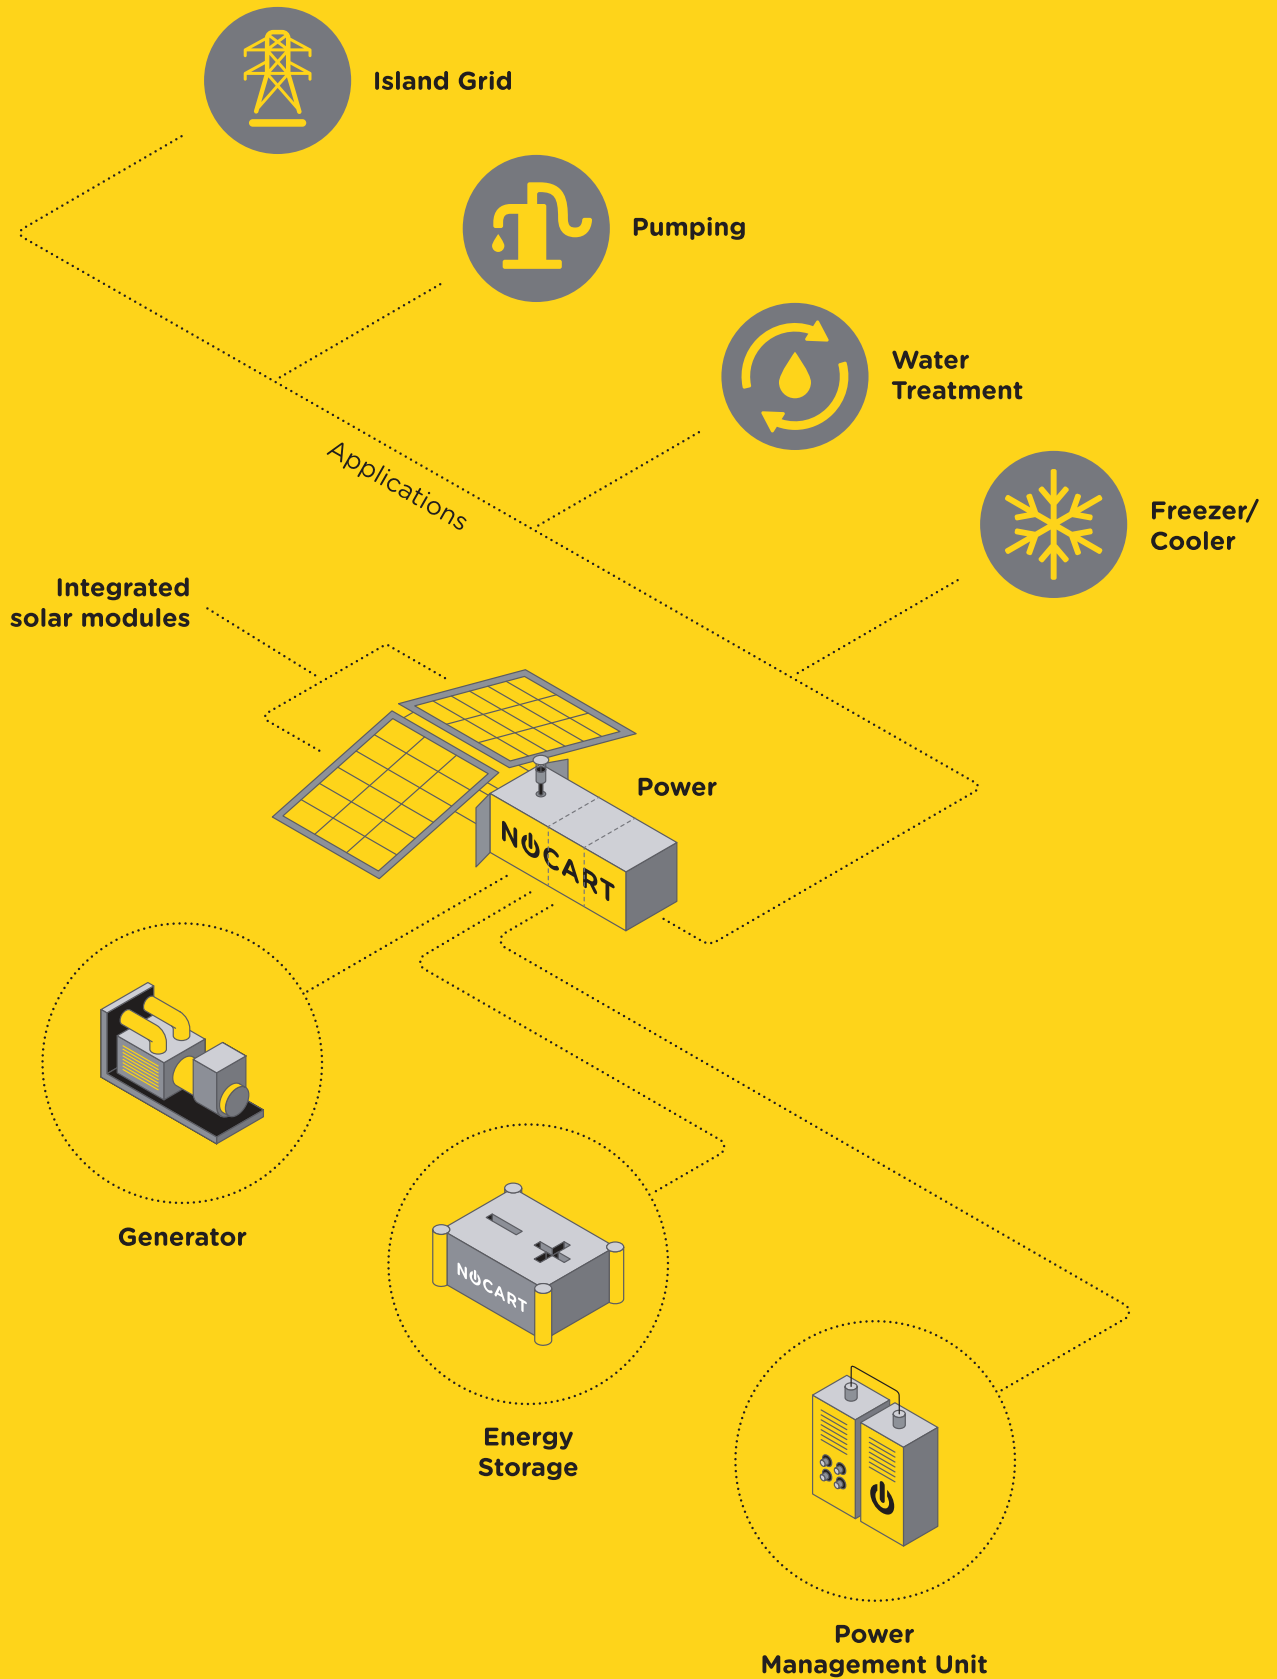

The Nocart Power Container generates and maintains an island grid with the Power Management Unit (PMU) as its main component. The PMU fulfils the general requirements for high quality power.

Seamless integration of renewable power

The Nocart Power Container is a transportable, self-sufficient power solution. It is a silent and environmentally friendly power production unit, which includes solar panels and batteries. It is also possible to add a diesel generator as a backup.

Modularity

The Nocart Power Container can be equipped with a room for a wide range of different applications.

Applications

The Nocard Power Management Unit enables seamless power for a variety of applications:

- Electricity
- Pumping
- Water treatment
- Freezer/cooler

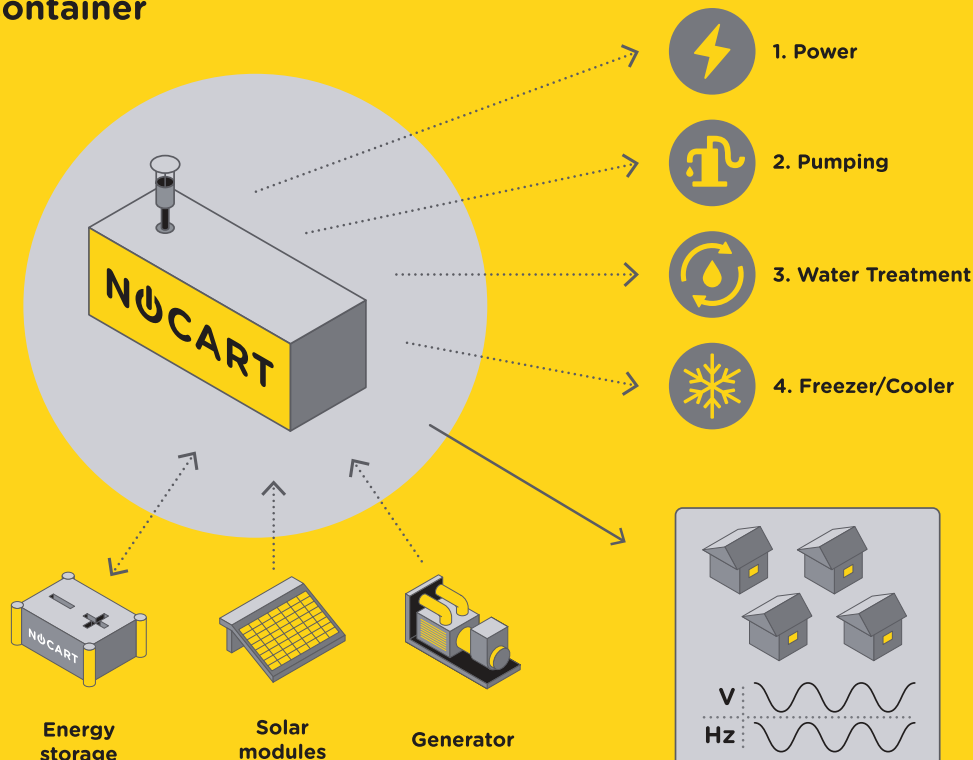

Technical features

	Power Output	Pumping	Water Treatment
Capacity	Up to 50 kW	6–30 m ³ /d	max 23 m ³ /d

Parallel connection is possible for higher power demands.

Typical example of use

Nocard Power Container

Safety

The Nocard Power Container has been designed according to European safety standards as well as regulations governing health and safety at work, and fulfils the requirements of European electrical safety standards. With its control mechanisms, the Power Container operates with a high degree of automation.
